

PRESS RELEASE

Dr. Carlo Monti joins TIG Environmental

TIG Environmental announces that Dr. Carlo Monti has joined the firm as a Managing Director of the firm's Forensics practice. Dr. Monti holds an undergraduate degree in Biology from the University of Milan and a Ph.D. in Environmental Sciences from the Italian Institute of Hydrobiology/University of Parma and the University of California, Davis. His previous work includes contaminant source forensics at sediment and upland sites, risk assessment, environmental impact studies, and work within the consumer product sector.

With over 25 years of experience and a background in quantitative ecology and hydrobiology, Dr. Monti specializes in evaluating the environmental impacts of chemical releases to nearby waterways, and their effects on the ecosystems within those waterways. Fluent in five languages (Italian, English, French, German, and Spanish), Dr. Monti has worked on projects throughout Europe, Asia, the Middle East, North Africa, North America, Central America, and South America.

This milestone is marked by the opening of a new international office in Lugano, Switzerland. In addition to leading the firm's efforts in further building out TIG Environmental's forensics capabilities, Dr. Monti will be pursuing new business opportunities with clients in Europe and South America, as well as engaging on several US-based projects. According to Dennis Farley, President and CEO of TIG Environmental, "We are excited to welcome Carlo to the TIG Environmental family. His addition to our team will further establish TIG Environmental as a leader in environmental forensics and allocation. Carlo's skills and experience providing these services in international markets helps accelerate and build upon TIG Environmental's existing international work and provides us with established leadership for further growth in this area." To support Dr. Monti's efforts, Sam Bowerman will also be based in the firm's European office. In addition to her continued work on North American projects, Ms. Bowerman will be involved in several overseas projects.

effects on the
ecosystems within
those waterways.

Environmental Services practice, regularly advises clients on matters involving complex liabilities for environmental remediation such as allocation, cost recovery, and related litigation. Its multi-discipline team of scientists, engineers, attorneys/legal professionals, archivists, researchers, and former law-enforcement personnel are routinely

deployed on complex, multiparty matters such as Superfund sites involving contaminated sediments, groundwater, and real property. The firm's Digital Forensics and Investigation practice also assists Environmental projects with services that include e-Discovery support for litigation, and the creation and management of databases, repositories, and document management platforms.
